Create Booking

Story Point

5

User Story:

As a Salon Owner (Harry) / Assistant (Harriet),
I can create a booking by selecting from available time slots on a requested date,
so that appointments are registered and double bookings are prevented.

Acceptance Criteria:

Given a customer requests a date
When the Salon Owner (Harry) or Assistant (Harriet) opens the booking flow
Then only unbooked slots between 10:00–18:00 Mon–Fri are shown

Given an available slot is selected and customer details entered
When the booking is confirmed
Then the appointment is saved and appears in the upcoming list

Given all slots on a date are fully booked
When the date is entered
Then the system informs the user no slots are available

Given input is invalid (wrong date format, outside opening hours)
When the booking is submitted
Then the system shows an error and does not crash

Delete Booking

Story Point

3

User Story:

As a Salon Owner (Harry) / Assistant (Harriet),
I can delete an existing appointment,
so that cancelled bookings are removed from the system.

Acceptance Criteria:

Given an existing appointment is selected for deletion
When the Salon Owner (Harry) or Assistant (Harriet) confirms the deletion
Then the appointment is removed from the list and the file is updated

Given a non-existent appointment ID is entered
When deletion is attempted
Then the system shows an error and does not crash

File Persistence – Save on Change, reload on startup

Story Point

3

User Story:

As a Salon Owner (Harry),
I need all appointment and payment data to survive a program restart,
so that no records are lost between sessions.

Acceptance Criteria:

Given an appointment is created, updated, or deleted

When the action completes

Then the change is immediately written to file

Given the program is restarted

When it loads

Then all previously saved appointments and payments are restored correctly

Given the data file is empty or does not exist

When the program starts

Then it initializes with an empty state without crashing

View Upcoming Appointments Sorted by Date and Time

Story Point

3

User Story:

As a Salon Owner (Harry) / Assistant (Harriet),
I can view all upcoming appointments sorted by date and time,
so that today's appointments are shown first.

Acceptance Criteria:

Given appointments exist across multiple dates
When the Salon Owner (Harry) opens the appointment list
Then they are displayed in ascending date and time order

Given no upcoming appointments exist
When the list is opened
Then the system displays a message indicating the list is empty

Register Payment for Completed Appointment

Story Point

5

User Story:

As a Salon Owner (Harry),
I can register that a completed appointment has been paid,
so that the salon's income is tracked.

Acceptance Criteria:

Given a completed appointment exists
When the Salon Owner (Harry) marks it as paid
Then the appointment status updates and the payment is saved to file

Given an appointment is already marked as paid
When the Salon Owner (Harry) tries to register payment again
Then the system prevents a duplicate and informs the user

Accountant Lookup – With Sorting

Story Point

5

User Story:

As an Accountant (Revisor),

I can look up a past date and see all customers served with their totals, sorted by name or payment amount,

so that I can verify the salon's financial records efficiently.

Acceptance Criteria:

Given a past date is entered

When the Accountant searches for it

Then all appointments from that date are listed with customer name and total amount

Given a list of results is displayed

When the Accountant selects sort by name

Then the list reorders alphabetically by customer name

Given a list of results is displayed

When the Accountant selects sort by amount

Then the list reorders by payment amount descending

Given a date with no appointments is entered

When the Accountant searches for it

Then the system displays a message indicating no records found

Given a future date or today's date is entered

When the Accountant searches for it

Then the system rejects it with an appropriate message

Password for Financial Access

Story Point

1

User Story:

As a Salon Owner (Harry) / Accountant (Revisor),

I must enter a password to access financial data,

so that sensitive information is protected.

Acceptance Criteria:

Given the financial menu is opened

When the Salon Owner (Harry) or Accountant (Revisor) is prompted

Then access is only granted if “hairyharry” is entered correctly

Given the wrong password is entered

When the prompt appears

Then access is denied and the user is returned to the main menu

Register Closed Days

Story Point

2

User Story:

As a Salon Owner (Harry),
I can register a closed day,
so that bookings cannot be made on holidays or days off.

Acceptance Criteria:

Given a date is registered as closed
When a booking is attempted on that date
Then the system rejects it and informs the user the salon is closed

5 Day Availability View

Story Point

2

User Story:

As a Salon Owner (Harry) / Assistant (Harriet),
I can see available slots across the next 5 working days,
so that I can offer alternatives when the requested day is full.

Acceptance Criteria:

Given a requested date is fully booked
When the availability view is opened
Then free slots for the next 5 working days are also shown

Product Add-ons to Appointment

Story Point

3

User Story:

As a Salon Owner (Harry) / Assistant (Harriet),
I can register product purchases as an add-on to a completed appointment,
so that the total bill reflects both the haircut and any products bought.

Acceptance Criteria:

Given a completed appointment exists

When a product purchase is added

Then the total bill updates to include the product amount

Given no appointment exists for the visit

When a product-only purchase is attempted

Then the system rejects it — products can only be added to an existing appointment

Customer Credit Feature

Story Point

5

User Story:

As a Salon Owner (Harry),
I can register if a customer has a credit deal,
so that I can control whether a customer owes money.

Acceptance Criteria:

Given a past unpaid appointment exists
When Harry registers a credit payment
Then the appointment is saved as unsettled and available for later settlement

Given an unsettled credit appointment exists
When Harry settles it
Then the appointment is marked as completed and no longer appears in the unsettled
list

Given the Accountant looks up a date
When appointments are listed
Then cash and credit payments are clearly distinguishable

Add Colors to Text

Story Point

2

User Story:

As Salon Owner (Harry) / Assistant (Harriet) and Accountant,
I can see the program in color,
so that everything is easier to distinguish between.

Acceptance Criteria:

Given menus, responses and error messages get displayed
When the program is being used
Then various colors get displayed at their rightful place

FURPS(+)

Functionality

Booking management, slot availability, opening hours, payment registration, sorting, accounting access

Usability

Simple interface and navigation, role separation

Reliability

Input validation, file persistence, crash prevention, startup recovery

Performance

Response time, file read/write

Supportability

Package structure, JavaDoc, naming conventions, readability

Plus

Only in Java console, offline, single user
